OBJECTIVES:

The objective of this course is to enable the students to

1) Understand the basic concepts of intelligent agents

Develop general-purpose problem solving agents, logical reasoning agents, and agents that reason under uncertainty

Employ AI techniques to solve some of today's real world problems.

9

UNIT I INTELLIGENT AGENTS

Introduction to AI – Agents and Environments – concept of rationality – nature of environments – structure of agents

Problem solving agents – search algorithms – uninformed search strategies

9

UNIT II PROBLEM SOLVING

Heuristic search strategies – heuristic functions

Local search and optimization problems – local search in continuous space – search with non-deterministic actions – search in partially observable environments – online search agents and unknown environments

9

UNIT III GAME PLAYING AND CSP

Game theory – optimal decisions in games – alpha-beta search – monte-carlo tree search – stochastic games – partially observable games

Constraint satisfaction problems – constraint propagation – backtracking search for CSP – local search for CSP – structure of CSP

9

UNIT IV LOGICAL AGENTS

Knowledge-based agents – propositional logic – propositional theorem proving – propositional model checking – agents based on propositional logic

First-order logic – syntax and semantics – knowledge representation and engineering – inferences in first-order logic – forward chaining – backward chaining -- resolution

9

UNIT V KNOWLEDGE REPRESENTATION AND PLANNING

Ontological engineering – categories and objects – events – mental objects and modal logic – reasoning systems for categories – reasoning with default information

Classical planning – algorithms for classical planning – heuristics for planning – hierarchical planning – non-deterministic domains – time, schedule, and resources -- analysis

COURSE OUTCOMES:

On successful completion of this course, the students will be able to

- 1 Explain autonomous agents that make effective decisions in fully informed, partially observable, and adversarial settings
- 2 Choose appropriate algorithms for solving given AI problems
- 3 Design and implement logical reasoning agents
- 4 Design and implement agents that can reason under uncertainty
